Product overview

The HP 8200 zl Switch Series offers high performance, scalability, and a wide range of features in a high-availability platform that dramatically reduces complexity and the total cost of ownership. As part of a unified wired and wireless network infrastructure solution, the 8200 zl Switch Series provides platform technology, system software, system management, application integration, wired and wireless integration, network security, and support that are common across HP modular and fixed-port switches. Together, these features deliver an agile, cost-effective, high-availability network solution.

With key technologies to provide solution longevity, the 8200 zl Switch Series delivers long-term investment protection—without added complexity for network core, aggregation, and high-availability access layer deployments. In addition to all of these capabilities, this switch series comes with a Limited Lifetime Warranty 2.0—making it a compelling switching solution.

A summary of the highlights of the 8200 zl Switch Series:

• Core, distribution, mission-critical access layer
• Advanced high-availability switches
• Integration with HP AllianceONE solutions
• L2-to-L4 intelligent edge feature set
• Enterprise-class performance and security
Features and benefits

Software-defined networking
• OpenFlow
  Supports OpenFlow 1.0 and 1.3 specifications to enable SDN by allowing separation of the data (packet forwarding) and control (routing decision) paths

Unified Wired and Wireless
• NEW HTTP redirect function
  Supports HP Intelligent Management Center (IMC) bring your own device (BYOD) solution

Quality of service (QoS)
• Advanced classifier-based QoS
  Classifies traffic using multiple match criteria based on L2, L3, and L4 information; and applies QoS policies such as setting the priority level and rate limiting to selected traffic on a per-port or per-VLAN basis
• L4 prioritization
  Enables prioritization based on TCP/UDP port numbers
• Traffic prioritization
  Allows real-time traffic classification into eight priority levels that are mapped to eight queues
• Bandwidth shaping
  – Port-based rate limiting
    Enabled per-port ingress/egress-enforced bandwidth increase
  – Classifier-based rate limiting
    Uses an access control list (ACL) to enforce increased bandwidth for ingress traffic on each port
  – Reduced bandwidth
    Provides per-port per-queue egress-based bandwidth reduction
• Class of service (CoS)
  Sets the IEEE 802.1p priority tag based on the IP address, IP type of service (ToS), L3 protocol, TCP/UDP port number, source port, and DiffServ

AllianceOne integration
• HP AllianceONE Services zl Module
  Allows applications to be embedded directly into the network—either distributed throughout the network at the network edge or centralized in the core or distribution layer (for more information about the AllianceONE solution, visit the HP website)
Management

• Remote intelligent mirroring
  Mirrors selected ingress/egress traffic based on an ACL, port, MAC address, or VLAN to a local or remote HP 8200 zl, 6600, 6200 yl, 5400 zl, or 3500 switch anywhere on the network
• Remote monitoring (RMON), Extended RMON (XRMON), and sFlow v5
  Provide advanced monitoring and reporting capabilities for statistics, history, alarms, and events
• IEEE 802.1ab link-layer discovery protocol (LLDP)
  Advertises and receives management information from adjacent devices on a network, facilitating easy mapping by network management applications
• Unidirectional link detection (UDLD)
  Monitors the cable between two switches and shuts down the ports on both ends if the cable is broken, turning the bidirectional link into a unidirectional one; this helps prevent network problems such as loops
• Command authorization
  Leverages the RADIUS to link a custom list of CLI commands to an individual network administrator’s login; an audit trail documents the activity
• Friendly port names
  Allows assignment of descriptive names to ports
• Dual flash images
  Provides independent primary and secondary operating system files for backup while upgrading
• Multiple configuration files
  Are easily stored with a flash image
• HP unified core-to-edge features
  Enables faster solution deployment with implementation of features that are common across the ProVision portfolio
• Comware CLI
  – Comware-compatible CLI
    Bridges the experience of HP Comware CLI users who use the ProVision software CLI
  – Display and fundamental Comware CLI commands
    Are embedded in the switch CLI as native commands; display output is formatted as on Comware-based switches and fundamental commands provide a Comware-familiar initial switch setup
  – Configuration Comware CLI commands
    Elicit CLI help to formulate the correct ProVision software CLI command
Connectivity
• High-density port connectivity
  Provides up to 12 interface-module slots and up to 288 wire-speed 10/100/1000 PoE-enabled
  ports or 96 10GbE ports per system
• IEEE 802.3az energy-efficient Ethernet
  Lowers power consumption in periods of low-link usage (supported on v2 zl 10/100/1000 and
  10/100 modules)
• IEEE 802.3af PoE
  Provides up to 15.4 W per port to IEEE 802.3af-compliant PoE-powered devices such as IP
  phones, wireless access points, and security cameras
• IEEE 802.3at PoE+
  Provides up to 30 W per port to IEEE 802.3at-compliant PoE/PoE+-powered devices such as
  video IP phones, IEEE 802.11n wireless access points, and advanced pan/zoom/tilt security
  cameras
• Jumbo frames
  Allow high-performance remote backup and disaster-recovery services on GbE and 10GbE
  ports
• HP unified core-to-edge hardware
  Enables sparing simplicity with the interface and service modules, Gigabit optics/10 GbE
  transceivers, and power supplies common across the ProVision family
• Pre-standard PoE support
  Detects and provides power to pre-standard PoE devices (refer to the list of supported devices
  in the product FAQs, which can be accessed at hp.com/networking)
• Auto-MDIIX
  Provides automatic adjustments for straight-through or crossover cables on all 10/100 and
  10/100/1000 ports
• IPv6
  – IPv6 host
    Enables switches to be managed in an IPv6 network
  – Dual stack (IPv4 and IPv6)
    Provides the transition mechanism from IPv4 to IPv6; and supports connectivity for both
    protocols
  – MLD snooping
    Forwards IPv6 multicast traffic to the appropriate interface
  – IPv6 ACL/QoS
    Supports ACL and QoS for IPv6 network traffic
  – IPv6 routing
    Supports static and open standard path first (OSPF) v3 routing protocols
  – 6-in-4 tunneling
    Supports encapsulation of IPv6 traffic in IPv4 packets
• Security
  Provides RA guard, DHCPv6 protection, dynamic IPv6 lockdown
**Performance**

- High-speed, high-capacity architecture
  
  Provides intra-module and inter-module switching with 739.2 million pps throughput on the purpose-built ProVision ASICs, using a 1.12 Tb/s crossbar switching fabric

- Selectable queue configurations
  
  Enables increased performance by selecting the number of queues and associated memory buffering that best meet the requirements of the network applications

- Scalable system design
  
  Provides built-in performance capacity/headroom to support next-generation high-density/high-speed connectivity with its efficient chassis architecture/backplane

**Resiliency and high availability**

- Virtual router redundancy protocol (VRRP)
  
  Allows groups of two routers to dynamically back each other up to create highly available routed environments for IPv4 and IPv6 networks

- Nonstop switching
  
  Improves network availability to better support critical applications, such as unified communication and mobility; interface and fabric modules continue switching traffic during a failover from an active to a standby management module

- Nonstop routing
  
  Enhances L3 high availability; OSPFv2/v3 and VRRP continue to operate and route network traffic during a failover from an active to a standby management module

- Redundant management, fabric, and power
  
  Provide enhanced system availability and continuity of operations

- Distributed trunking
  
  Enables loop-free and redundant network topology without using STP; and allows a server or switch to connect to two switches using one logical trunk for redundancy and load sharing

- Multiple spanning tree protocol (STP) and IEEE 802.1s
  
  Offers high link availability in multiple VLAN environments by allowing multiple spanning trees; encompasses IEEE 802.1d STP and IEEE 802.1w Rapid STP

- IEEE 802.3ad link-aggregation-control protocol (LACP) and HP port trunking
  
  Support up to 144 trunks, each with up to eight links (ports) per trunk

- Proven ProVision ASIC and system architecture
  
  Reduces technology risk and provides reliable support and flexibility—with the architecture leveraged from the successful HP 5400 zl, 3500, 6600, and 6200 yl Switch Series
• HP zl family components
  Employ proven intelligent edge switch interface modules, optics, and power supplies to reduce technology risk and enhance system reliability
• Hot-swappable modules
  Enables the interface, management, and fabric modules as well as mini-GBIC optics and power supplies to be removed, swapped, or added to the system—without interrupting ongoing switch operations
• Redundant fan design and hot-swappable fan tray
  Provide continuity of operation in case of a single fan failure
• Passive chassis backplane
  Provides system reliability and reduces the impact of a component failure (no traffic-forwarding active components)
• SmartLink
  Provides easy-to-configure link redundancy of active and standby links

**L2 switching**

• VLAN support and tagging
  Supports the IEEE 802.1Q standard and 2,048 VLANs simultaneously
• IEEE 802.1v protocol VLANs
  Isolate select non-IPv4 protocols automatically into their own VLANs
• GARP VLAN registration protocol
  Allows automatic learning and dynamic assignment of VLANs
• IEEE 802.1ad Q-in-Q
  Increases the scalability of an Ethernet network by providing a hierarchical structure; and connects multiple LANs on a high-speed campus or metro network
• MAC-based VLAN
  Provides granular control and security; and uses the RADIUS to map a MAC address/user to specific VLANs (requires v2 modules)
• Rapid per-VLAN spanning tree (RPVST+)
  Allows each VLAN to build a separate spanning tree to improve link bandwidth usage; is compatible with PVST+
• HP switch meshing
  Enables dynamic load balancing across multiple active redundant links to increase the aggregate bandwidth availability; and allows concurrent L3 routing with v2 modules
L3 services
• User datagram protocol (UDP) helper function
  Allows UDP broadcasts to be directed across router interfaces to specific IP unicast or subnet broadcast addresses; and helps prevent server spoofing for UDP services such as DHCP
• Loopback interface address
  Defines an address in the routing information protocol (RIP) and OSPF, improving the diagnostic capability
• Route maps
  Provide more control during route redistribution; and allow filtering and altering of route metrics
• NEW DHCP server
  Centralizes and reduces the cost of IPv4 address management

L3 routing
• Static IP routing
  Provides manually configured routing for both IPv4 and IPv6 networks
• RIP
  Includes RIPv1 and RIPv2 routing
• OSPF
  Provides OSPFv2 for IPv4 routing and OSPFv3 for IPv6 routing
• Policy-based routing
  Uses a classifier to select traffic that can be forwarded based on the policy set by the network administrator (requires v2 modules)
• IPv4 border gateway routing protocol
  Is scalable, robust, and flexible

Security
• ACLs
  Provide filtering based on the IP field, source/destination IP address/subnet and source/destination TCP/UDP port number on a per-VLAN or per-port basis
• Multiple user authentication methods
  – IEEE 802.1X users per port
    Enables authentication of multiple IEEE 802.1X users per port
  – Web-based authentication
    Authenticates from the Web browser for clients that do not support the IEEE 802.1X supplicant
  – MAC-based authentication
    Provides client authentication with a RADIUS server, based on the client’s MAC authentication
  – Concurrent IEEE 802.1X, Web, and MAC authentication schemes per port
    Allows a switch port to accept up to 32 sessions of IEEE 802.1X, Web, and MAC authentications
• Virus throttling
  Detects traffic patterns typical of worm-type viruses; and either throttles or helps entirely prevent the virus from spreading across the routed VLANs or bridged interfaces without requiring external appliances

• DHCP protection
  Blocks DHCP packets from unauthorized DHCP servers, mitigating denial-of-service attacks

• Secure management access
  Delivers secure encryption of all access methods (CLI, GUI, and MIB) through SSHv2, SSL, and/or SNMPv3

• Management interface wizard
  Helps secure management interfaces such as SNMP, telnet, SSH, SSL, Web, and USB at the desired level

• Switch CPU protection
  Provides automatic protection against malicious network traffic trying to shut down the switch

• ICMP throttling
  Defeats ICMP denial-of-service attacks by enabling any switch port to automatically throttle ICMP traffic

• Identity-driven ACL
  Enables implementation of a highly granular and flexible access security policy and VLAN assignment specific to each authenticated network user

• STP bridge protocol data units (BPDUs) port protection
  Blocks BPDUs on ports that do not require BPDUs, mitigating forged BPDU attacks

• Dynamic IP lockdown
  Works with DHCP protection to block traffic from unauthorized hosts, mitigating IP source address spoofing

• Dynamic ARP protection
  Blocks ARP broadcasts from unauthorized hosts, helping prevent eavesdropping or theft of network data

• Detection of malicious attacks
  Monitors 10 types of network traffic; and sends a warning when an anomaly that can be potentially caused by malicious attacks is detected

• Port security
  Allows access only to specified MAC addresses, which can be learned or specified by the administrator

• MAC address lockout
  Helps prevent certain configured MAC addresses from connecting to the network

• Source-port filtering
  Allows only specified ports to communicate with each other
• RADIUS/TACACS+
  Eases switch management security administration by using a password authentication server
• Secure shell (SSH)
  Encrypts all transmitted data for secure remote CLI access over IP networks
• Secure sockets layer (SSL)
  Encrypts all HTTP traffic, allowing secure access to the browser-based management GUI in the switch
• Secure FTP
  Allows secure file transfer to and from the switch; and protects against unwanted file downloads or unauthorized copying of a switch configuration file
• Switch management logon security
  Helps secure switch CLI logon by optionally requiring either RADIUS or TACACS+ authentication
• Security banner
  Displays a customized security policy when users log in to the switch
• STP root guard
  Protects the root bridge from malicious attacks or configuration mistakes
• Integrated threat management applications
  Includes advanced, scalable, switch-integrated security tools such as stateful firewall, intrusion detection system (IDS)/intrusion prevention system (IPS), and VPN concentrator (via the HP Threat Management Services zl Module)

**Convergence**
• IP multicast routing
  Includes PIM sparse and dense modes to route IP multicast traffic
• IP multicast snooping (data-driven IGMP)
  Helps prevent flooding of IP multicast traffic
• LLDP-media endpoint discovery (MED)
  Defines a standard extension of LLDP that stores values for parameters such as QoS and VLAN to automatically configure network devices such as IP phones
• PoE allocations
  Supports multiple methods—automatic, IEEE 802.3af class, LLDP-MED, or user specified—to allocate PoE power for more efficient energy use
• Auto VLAN configuration for voice
  – RADIUS VLAN
    Uses a standard RADIUS attribute and LLDP-MED to automatically configure a VLAN for IP phones
  – CDPv2
    Uses CDPv2 to configure legacy IP phones

• Local MAC authentication
  Assigns attributes such as VLAN and QoS, using a locally configured profile that can be a list of MAC prefixes

Flexibility
• Unified wired and wireless deployment and management
  Employs the HP MSM765zl Mobility Controller and offers secure, advanced wireless services with simplified management as well as unified wired and wireless operation across the network
• Complete feature set
  Provides Gigabit PoE for edge VoIP solutions, scalable 10 GbE for enterprise-class distribution-layer implementations, advanced wireless management for comprehensive mobility solutions, and critical high-availability features for midmarket core network deployments
• Programmable ASIC design
  Enables the seamless addition of new QoS and security features over time—without costly hardware upgrades

Warranty and support
• Limited Lifetime warranty 2.0
  Advance hardware replacement with next-business-day delivery (available in most countries). See hp.com/networking/warrantysummary for duration details
• Electronic and telephone support (for Limited Lifetime Warranty 2.0)
  Limited 24x7 telephone support is available from HP for the first 3 years; limited electronic and business hours telephone support is available from HP for the entire warranty period; to reach our support centers, refer to hp.com/networking/contact-support; for details on the duration of support provided with your product purchase, refer to hp.com/networking/warrantysummary
• Software releases
  To find software for your product, visit hp.com/networking/support; for details on the software releases available with your product purchase, visit hp.com/networking/warrantysummary
# HP 8200 zl Switch Series

## HP 8206 zl Switch with Premium Software (J9640A)

### Mounting
Mounts in an EIA-standard 19 in telco rack/equipment cabinet (hardware included); horizontal surface mounting only. An optional 4-post cabinet rail is available (see ordering guide).

### Immunity

| EN | EN 55024, CISPR 24 |
| ESD | IEC 61000-4-2; 4 kV CD, 8 kV AD |
| Radiated | IEC 61000-4-3; 3 V/m |
| EFT/Burst | IEC 61000-4-4; 1.0 kV (power line), 0.5 kV (signal line) |
| Surge | IEC 61000-4-5; 1 kV/2 kV AC |
| Conducted | IEC 61000-4-6; 3 V |
| Power frequency magnetic field | IEC 61000-4-8; 1 A/m, 50 or 60 Hz |
| Voltage dips and interruptions | IEC 61000-4-11; >95% reduction, 0.5 period; 30% reduction, 25 periods |
| Harmonics | EN 61000-3-2; IEC 61000-3-2 |
| Flicker | EN 61000-3-3, IEC 61000-3-3 |

### Management

| IMC — Intelligent Management Center; command-line interface; Web browser; configuration menu; out-of-band management (serial RS-232C) |

### Notes

| Interface/Service modules, power supplies, and redundant management module must be ordered separately. RS-232C console port via an RJ-45 connector. Supported 1G SFP transceivers are revision “B” or later (product number ends with the letter “B” or later; for example, J9142B, J8177C) |

### Services

| Refer to the HP website at hp.com/networking/services for details on the service-level descriptions and product numbers. For details about services and response times in your area, please contact your local HP sales office. |

### Standards and Protocols
*(applies to all products in series)*

#### BGP
- RFC 1997 BGP Communities Attribute
- RFC 2918 Route Refresh Capability
- RFC 4456 BGP Route Reflection: An Alternative to Full
- RFC 4271 A Border Gateway Protocol 4 (BGP-4) Mesh Internal BGP (IBGP)
- RFC 4724 Graceful Restart Mechanism for BGP

#### Denial of service protection
- CPU DoS Protection

#### Device management
- RFC 1591 DNS (client) HTML and telnet management

#### General protocols
- IEEE 802.1ad Q-in-Q
- IEEE 802.3x Flow Control
- IEEE 802.1AX-2008 Link Aggregation
- IEEE 802.1D MAC Bridges
- IEEE 802.1p Priority
- IEEE 802.1Q VLANs
- IEEE 802.1s Multiple Spanning Trees
- IEEE 802.1v VLAN classification by Protocol and Port
- IEEE 802.1w Rapid Reconfiguration of Spanning Tree
- IEEE 802.3ad Link Aggregation Control Protocol (LACP)
- IEEE 802.3af Power over Ethernet
- RFC 768 UDP
- RFC 783 TFTP Protocol (revision 2)
- RFC 792 ICMP
- RFC 793 TCP
- RFC 826 ARP
- RFC 854 TELNET
- RFC 868 Time Protocol
- RFC 951 BOOTP
- RFC 1058 RIPv1
- RFC 1350 TFTP Protocol (revision 2)
- RFC 1519 CIDR
- RFC 1542 BOOTP Extensions
- RFC 1918 Address Allocation for Private Internet
- RFC 2030 Simple Network Time Protocol (SNTP) v4
- RFC 2131 DHCP
- RFC 2453 RIPv2
- RFC 2548 (MS-RAS-Vendor only)
- RFC 3046 DHCP Relay Agent Information Option
- RFC 3576 Ext to RADIUS (CoA only)
- RFC 3768 VRRP
- RFC 4675 RADIUS VLAN & Priority
- RFC 5798 VRRP (exclude Accept Mode and sub-sec timer)

#### IP multicast
- RFC 3376 IGMPv3 (host joins only)
- RFC 3973 PIM Dense Mode
IPv6
RFC 1981 IPv6 Path MTU Discovery
RFC 3596 DNS Extension for IPv6
RFC 4293 MIB for IP
RFC 2375 IPv6 Multicast Address Assignments
RFC 3810 Multicast Listener Discovery Version 2
RFC 4294 IPv6 Node Requirements
RFC 2460 IPv6 Specification
RFC 2464 Transmission of IPv6 over Ethernet Networks
RFC 2710 Multicast Listener Discovery (MLD) for IPv6
RFC 2925 Definitions of Managed Objects for Remote (MLDv2) for IPv6
RFC 4022 MIB for TCP
RFC 4087 IP Tunnel MIB
RFC 4113 MIB for UDP
RFC 4419 Key Exchange for SSH
RFC 4443 ICMPv6
RFC 4541 IGMP & MLD Snooping Switch
RFC 4861 IPv6 Neighbor Discovery Ping, Traceroute, and Lookup Operations (Ping only)
RFC 4213 Basic Transition Mechanisms for IPv6 Hosts
RFC 4862 IPv6 Stateless Address Auto-configuration
RFC 3019 MLDv1 MIB
RFC 3315 DHCPv6 (client and relay)
RFC 3484 Default Address Selection for IPv6
RFC 3587 IPv6 Global Unicast Address Format and Routers
RFC 4251 SSHv6 Architecture
RFC 4252 SSHv6 Authentication
RFC 4253 SSHv6 Transport Layer
RFC 4254 SSHv6 Connection
RFC 4291 IP Version 6 Addressing Architecture
RFC 5095 Deprecation of Type 0 Routing Headers in IPv6
RFC 5340 OSPFv3 for IPv6
RFC 5453 Reserved IPv6 Interface Identifiers
RFC 5519 Multicast Group Membership Discovery MIB (MLDv2 only)

MIBs
IEEE 802.1ab Link Layer Discovery Protocol (LLDP)
RFC 2819 Four groups of RMON: 1 (statistics), 2 (history), 3 (alarm) and 9 (events)
ANSI/TIA-1057 LLDP Media Endpoint Discovery (LLDP-MED)
RFC 3176 sFlow
RFC 5424 Syslog Protocol
SNMPv1/v2c/v3
XRMON

Network management
IEEE 802.1 Tab Link Layer Discovery Protocol (LLDP)
RFC 2819 Four groups of RMON: 1 (statistics), 2 (history), 3 (alarm) and 9 (events)
ANSI/TIA-1057 LLDP Media Endpoint Discovery (LLDP-MED)
RFC 3176 sFlow
RFC 5424 Syslog Protocol
SNMPv1/v2c/v3
XRMON

OSPF
RFC 2328 OSPFv2
RFC 3101 OSPF NSSA
RFC 3623 Graceful OSPF Restart (Unplanned Outages only)
RFC 5340 OSPFv3 for IPv6
QoS/CoS
RFC 2474 DiffServ Precedence, including 8 queues/port
RFC 2597 DiffServ Assured Forwarding (AF)

Security
IEEE 802.1X Port Based Network Access Control
RFC 2865 RADIUS (client only)
RFC 3579 RADIUS Support For Extensible Authentication
RFC 1492 TACACS+ RFC 2866 RADIUS Accounting Protocol (EAP)
Secure Sockets Layer (SSL)
SSHv2 Secure Shell
