Z by HP Discrete Graphics Quick Reference Guide

Discrete graphics solutions for Z by HP Workstations

HP is proud to offer discrete graphics choices on all of our Z by HP workstations—from the HP ZBook family to our ultimate workstation, the HP Z8 Fury.

HP's professional graphics line-up is perfect for users who are running business critical applications who require stability, reliability, great performance, additional support, and application-specific features and optimization for things like complex design modeling, dataset manipulation, visual effects and visualization.

Note: Currently, Z2 Mini, Z2 SFF, Z2 Tower, Z1 Entry Tower and all ZBooks support CPUs with built-in integrated graphics. Please refer to platform quickspecs for details on the CPU integrated graphics supported in that platform.

HP Z Desktop Workstation notes

- 1 Not all video outputs of the graphics card may support the stated Max Resolution. See the card QuickSpecs for details and any restrictions.
- 2 Tested by select ISVs.
- 3 “Half height” is also known as “Low profile”, “Single slot” is also known as “Single width”, and “Dual slot” is also known as “Dual width.”
- 4 Some video display modes such as 7680x4320 @60 Hz require the use of DSC (Display Stream Compression).

5 Different graphics architectures “Cores” cannot be directly compared. Cores is useful for comparing graphics that are of the same architecture, usually designated by common prefix letter(s) in the model name.

HP ZBook Mobile Workstation notes

- 1 See mobile workstation system specifications for display output types and max displays and resolutions supported.
- 2 Different graphics architectures “Cores” cannot be directly compared. Cores is useful for comparing graphics that are of the same architecture, usually designated by common prefix letter(s) in the model name.
- 3 All notebook designs but Fury used here requires the CPU’s graphics engine to drive all display signals. Hence, it is the CPU’s graphics that determines what maximum display resolution is possible to support. The maximum resolutions of the notebook’s CPUs are documented in the respective notebook’s QuickSpecs.

4 Baseline GPU TGP (Total Graphics Power) in watts when on AC power adapter. ZBooks opportunistically enables a boosted power level above the baseline TGP when the system temperature and power consumption allow.

HP Z1 notes

- 1 Not all video outputs of the graphics card may support the stated Max Resolution. See the card QuickSpecs for details and any restrictions.
- 2 “Half height” is also known as “Low profile”, “Single slot” is also known as “Single width”, and “Dual slot” is also known as “Dual width”.

HP Z6 G5, Z6 G5A and Z8 Fury G5A notes

- 1 NVIDIA® A800 Active requires either the T1000 8 GB, A4000, or 4000 Ada to be configured with it.
