Configuring Multiple Displays on HP ZBook G7, G8 and G9

Introduction

HP ZBooks support multiple independent displays as standalone systems and when docked. This paper provides detailed configuration information. When connecting multiple displays, HP recommends the use of a docking station.

Systems covered in this document include the HP ZBook G7, G8 and G9 laptops. Docks include the HP Thunderbolt G4 Dock (120W and 280W), the HP USB-C® Dock G5 (120W), and the HP Thunderbolt Dock G4 (280W) USB-C®/A Universal Dock G2 (120W).

How to use this document

When connecting multiple displays to HP ZBooks, note the display resolution, host DisplayPort™ version, and available ports. To configure multiple displays on HP ZBooks using this document:

- Note the resolution(s) of the displays you wish to connect.
- See Table 1 to determine how many displays your system can host and if you need a docking station.
For connecting multiple displays without a dock, refer to the hosts QuickSpecs.
- See Table 2 to determine if your system has DisplayPort™ 1.2, 1.3, or 1.4.
- Use Table 3 for docking station compatibility and support for HP ZBooks.
- Determine if your system is using 4 lane DisplayPort™ (aka DisplayPort™x4 or high resolution mode in HP F10 setup) or 2 lane DisplayPort™ (aka DisplayPort™x2 or default).
- For the HP Thunderbolt G4 Dock, use Tables 3-7 to determine if your desired configuration is possible, and which ports to use.
- For the HP USB-C® Dock, use Tables 8-11 to determine if your desired configuration is possible, and which ports to use.
- Note configuration details, exceptions, and clarifications in the configuration notes sections.
- An X in a table cell indicates that the configuration is supported. Numbers in parenthesis () are quantities.

Host system considerations

When configuring multiple displays on HP ZBooks using HP Docking Stations, host specifications will determine the maximum resolution of the attached displays.

Table 1 indicates the maximum number of displays supported on HP ZBooks with and without a docking station (not including DisplayPort™ daisy chain), and which graphics operating modes apply.

Graphics Operating Modes

- Integrated (iGPU).** Graphics that are integrated with the processor. Also called Unified Memory Architecture (UMA) since it uses system memory instead of dedicated video memory. In HP ZBooks, it is primarily Intel® Integrated graphics.
- Discrete (dGPU).** A separate graphics subsystem in a computer, such as a Mobile PCI Express Module (MXM) graphics, with dedicated video memory. In HP ZBooks, they are typically NVIDIA® Quadro® GPUs.
- Hybrid.** The system uses iGPU for most tasks to conserve battery life, and switches to dGPU when higher performance is required. In a hybrid configuration, some displays are driven by iGPU while others are driven by dGPU.

Table 1: Maximum Displays Supported by HP ZBooks (no DisplayPort™ daisy-chain)

Host	Number of displays no dock	Number of displays with dock
G9		
HP ZBook Studio 16" G9	Up to 4 iGPU	Up to 4 iGPU
		Up to 5 docked to TBT4
		4 from iGPU +1 from NVIDIA®
		Up to 6 docked to Multi-Function
		3 from iGPU + 3 from NVIDIA®
HP ZBook Fury 16 G9	Up to 5	Up to 5

Notes on G7 HP ZBooks (docked and undocked):

- ¹ Displays connected to HDMI and one (1) of the two (2) USB Type-C* connectors on the HP ZBook Fury 15/17 G7 cannot be active at the same time.
- ² Up to four (4) displays may be active on the HP Thunderbolt Dock G4 dock. When one Thunderbolt™ 4 Type-C* ports on the HP ZBook is used for display output, up to three (3) displays may be active on the HP Thunderbolt Dock G4.
- ³ When a display on the HP ZBook G7 USB Type-C* connector is active, use either the Thunderbolt™ 4 port or the other ports (HDMI, legacy DisplayPort™, USB Type-C* DisplayPort™) on the HP Thunderbolt Dock G4, but not both. (There are two (2) DisplayPort™ streams through the Thunderbolt™ controller. The HP Thunderbolt Dock requires two (2) DisplayPort™ streams, one (1) for the MST Hub downstream ports (HDMI, two (2) DisplayPort™, Type-C* DisplayPort™) and one (1) for the Thunderbolt™ port. When a display on the Type-C* connector of the HP ZBook is active, there is only one (1) DisplayPort™ stream for the dock.)
- ⁴ HP ZHAN 99 G2 and G3 only have USB data transfer capability on Type-C*, no charging function, no Display port support from Type-C* port.
- ⁵ Due to the output displays are only controlled by iGPU not by dGPU on Firefly and Power, therefore no call out for dGPU.

•HP ZBook Ports

Displays can be connected to HP ZBooks via USB Type-C® Thunderbolt™ (DisplayPort™ 1.2, 1.3, or 1.4), HDMI, and mini DisplayPort™. Table 2 is a general guideline listing the host system and ports.

		(1) HDMI 2.1	
HP ZBook Power G9	(1) Thunderbolt™ 4 with USB4™ Type-C® 40 Gbps signaling rate (USB Power Delivery, DisplayPort™ 1.4)	(1) HDMI 2.0b	(1)* 8K @30 Hz + (1) 4K @60 Hz
HP ZBook Firefly G9	(2) Thunderbolt™ 4 with USB4™ Type-C® 40 Gbps signaling rate (USB Power Delivery, DisplayPort™ 1.4)	(1) HDMI 2.0b	(2) 8K @30 Hz + (1) 4K @60 Hz

¹ Mini DisplayPort™ 1.4 with dGPU; mini DisplayPort™ 1.2 with iGPU.

² HDMI 2.0b with dGPU; HDMI 1.4 with iGPU.

³ BC 1.2 (Battery Charging) provides higher amperage for charging.

External display resolutions when connected directly to a ZBook.

- For DP1.4 DSC, the resolution up to 8K @60 Hz*
- For DP1.3/DP1.4, the resolution up to 8K @30 Hz*
- For DP1.2, the resolution up to 4K @60 Hz*
- For HDMI 2.1, the resolution up to 8K @30 Hz*
- For HDMI 2.0, the resolution up to 4K @60 Hz*
- For HDMI 1.4b, the resolution up to 4K @30 Hz*

* Resolutions cannot be summed up. Max resolution of each display will be adjusted automatically when connecting multiple display on the host.

DP1.4 * Intel TGL worldwide silicon issues cannot be fixed so that DSC is disabled on docking (MST mode), but it's still supported with direct output (SST mode).

Docking Station Considerations

HP offers Thunderbolt™ docks and USB Type-C® docks. Table 4 summarizes supported docks by system, along with power and charging notes. HP Docking Stations recommended for HP ZBooks include the HP Thunderbolt G4 Dock (120W and 280W), the HP USB-C® Dock G5 (120W), and the HP USB C®/A Universal Dock G2 (120W). Check compatibility on <https://pcb.inc.hp.com/> and search by notebook.

HP USB-C® Dock G5 (120W)	13-15
HP USB-C/A® Universal Dock G2 (120W)	16-18
Glossary	19-20

Consider power requirements when choosing a dock. For example, the HP Thunderbolt 120W G4 Dock fully functions on HP ZBooks, but some models require additional power for charging. In that case, order the HP Thunderbolt 280W G4 Dock. The combo cable connects the dock to the host system's Thunderbolt™ 4 or USB-C® port and uses a separate barrel connector to provide power.

Due to space limitations, the tables in this document use the following abbreviations:

FPC. Full Performance Charging.

CWW. Charging with warning . The HP ZBook will charge with this warning message: "HP Notifications - Smart AC adapter power output is too low for this computer." or "HP Notifications - For full performance, connect a higher capacity power adapter."

MF. Multi-function mode.

DSC. Display Stream Compression.

11. 2x USB-A 3.2

Ports HP Thunderbolt Dock G4

The HP Thunderbolt 120W and 280W G4 Dock ports include:

- (1) USB-C® 3.2 Gen 2 DisplayPort™
- (1) Thunderbolt™ 4 port
- (1) HDMI 2.0 port
- (2) DisplayPort™ 1.4 ports

Tables 5-8 list supported configurations based on a Thunderbolt™ host with a single and dual DisplayPort™ streams, supported resolutions, ports, and DisplayPort™ requirements (DisplayPort™ 1.2, DisplayPort™ 1.3/14, and DisplayPort™ 1.4 with DSC).

HP ZBooks (Thunderbolt™ hosts) have dual DisplayPort™ streams, except for HP ZHAN 99, which has a single DisplayPort™ stream. A non-Thunderbolt™ host with high resolution refers to four (4) lane DisplayPort™. A non-Thunderbolt™ multifunction host refers to two (2) lane DisplayPort™.

Configuration notes: HP ZBook and the HP Thunderbolt Dock G4

- The number of displays supported, and their resolution depend on the host. HP ZBooks support DisplayPort™ 1.2, 1.3, or 1.4 and/or Thunderbolt™ 4.
- For USB-C® functionality, the host HP ZBook must support the DisplayPort™ Alt mode (also called USB-C® Video) protocol through its USB-C® port. Thunderbolt™-enabled notebooks will function at USB-C® speeds.
- HP ZBooks based on 10th gen Intel® Core™ processors with DisplayPort™ 1.2 support two (2) 4K displays at 60 Hz.
- If the host does not have Thunderbolt™ 4 and is plugged into the HP Thunderbolt Dock G4, the Thunderbolt™ 4 (port 12) will have USB 3.1 Gen 2 functionality with video.

- For HP ZBooks with Thunderbolt™ 3 that support DisplayPort™ 1.3: if two (2) or more displays are attached via the two (2) DisplayPort™ (port 8) or USB-C® DisplayPort™ (port 9), the Thunderbolt™ 3 port (port 12) is limited to displays with a resolution of 2560 x 1440 at 60 Hz.
- The HP Thunderbolt Dock G4 is DSC-ready (Display Stream Compression). Hosts that support DisplayPort™ 1.4 DSC can connect to three (3) 4K displays at 60 Hz. Enables support of higher resolution displays, typically 3:1.

HP USB-C/A® Universal Dock G2 (120W)	16-18
Glossary	19-20

Configuration notes: HP Thunderbolt Dock G4 Tables 5-8

- ¹ MST Hub refers to DisplayPort™ ports and Type-C® DisplayPort™ downstream ports.
- ² USB-C® DP Alt port and DisplayPort™ bottom port are exclusive (only one may be activate at a time).
- ³ Thunderbolt™ video may use one (1) or two (2) DisplayPort™ streams (x4 or x8). When it is using two (2) streams, MST Hub does not support video.
- ⁴ Chart priority MST Hub over Thunderbolt™ (as MST Hub has up to 3 displays).
- ⁵ Unless noted, resolution is driven at 8bpp, 60 Hz.
- ⁶ Chart shows capability of dock. Actual support depends on host. For example, some hosts cannot support 8K. Some host support three (3) displays while others support four (4) or more. Some hosts use two (2) internal pipes to support one (1) display (such as an 8K display).
- ⁷ The maximum number of supported displays is reduced by one (1) when using an 8K external display.
- ⁸ On displays with the dual DisplayPort™ cable, both cables must be attached to the dock DisplayPort™ ports.

Adding additional displays

For five (5) display configurations on HP ZBooks, use the charts plus the internal panel or mini-DP/HDMI.

- System must be in hybrid graphics mode with NVIDIA® graphics.
- System may be in hybrid or dGPU only mode with AMD graphics.
- System must be in hybrid graphics mode and must have AMD graphics HP USB-C® Dock G5 (120W).

Ports HP USB-C® Dock G5

The HP USB-C® Dock G5 120W ports include:

- (1) HDMI 2.0 port
- (2) DisplayPort™ 1.4 ports

Configuration notes: HP USB-C® Dock G5

1. For USB-C® functionality, host PC must support the DisplayPort™ Alt mode protocol through its USB-C® port. Thunderbolt™-enabled notebooks will function at USB-C® speeds.

The number of displays supported and their resolution depend on the host.

Configuration notes: HP USB-C® Dock G5

- ¹ For USB-C® functionality, host PC must support the DisplayPort™ Alt mode protocol through its USB-C® port. Thunderbolt™-enabled notebooks will function at USB-C® speeds.
- ² HDMI is limited to 4K @60 Hz DSC.
- ³ DSC is disabled when display is attached to the VGA port or to an external DisplayPort™-to-VGA dongle.
- ⁴ DisplayPort™ Multi-stream (MST) mode is not supported on the DisplayPort™ and Type-C® DisplayPort™ Ports.
- ⁵ Unless noted, resolution is driven at 8bpp, 60Hz.
- ⁶ Chart shows capability of dock. Actual support depends on host. For example, some host cannot support 8K. Some host support 3 simultaneous displays while others support 4 or more. Some hosts use 2 internal pipes to support a single display (such as an 8K display).
- ⁷ The maximum number of supported displays is reduced by one (1) when using an 8K external display.
- ⁸ On displays with the dual DisplayPort™ cable, both cables must be attached to the docks DisplayPort™ ports.

Configuration notes: USB-C*/A Universal Dock G2

¹ DisplayLink drives all single and dual display combination in MF mode.

² Host GPU drives HDMI in High Resolution mode.

³ Host GPU drives HDMI when both DisplayPort™ ports are active.

⁴ In High Resolution mode, DisplayLink is running at USB 2.0 speed. This has significant performance impacts on DisplayPort™ 1 and DisplayPort™ 2 output.

⁵ When dock is attached to USB-A on host (using USB-A to USB-C* dongle), you are limited to two (2) displays.

⁶ DisplayLink DL-6950 (USB3.1 Gen1, DisplayPort™ 1.2, HDMI 2.0) supports a single (1) 4K @60 Hz (DCI), two (2) 4K @60 Hz (UHD).

⁷ Disable DisplayPort™ MST on displays with this feature (MST is not currently supported).

Glossary

Combo Cable

HP Thunderbolt 280W G4 Dock with Combo Cables connects the dock to the host system's Thunderbolt™ 4 or USB-C® port and uses a separate barrel connector to provide power over A/C passthrough up to 230W.

Display Stream Compression (DSC)

DSC is a VESA standard that enables visually lossless image compression to increase the amount of data carried by a display interface data rate, saving power. It reduces the video interface data rate, which reduces system power, prolongs battery life, and reduces interconnects, enabling sleeker designs.

DisplayPort™ Daisy Chain

Connecting a series of devices together using a single connection between each two devices. Daisy chainable displays have both a DisplayPort™ input and a DisplayPort™ output. The DisplayPort™ output connects to the next downstream display.

DisplayPort™ High Resolution

Refers to four (4) lane DisplayPort™.

DisplayPort™ Multi-function

Refers to two (2) lane DisplayPort™, aka Default mode.

Graphics Processing Units (GPUs)

- Integrated (iGPU). Graphics that is integrated with the processor. Also called Unified Memory Architecture (UMA) since it uses system memory instead of dedicated video memory. In HP ZBooks, it is primarily Intel® Integrated graphics.
- Discrete (dGPU). A separate graphics subsystem in a computer, such as a Mobile PCI Express Module (MXM) graphics, with dedicated video memory. In HP ZBooks, they are typically NVIDIA® Quadro® GPUs.
- Hybrid. The system uses iGPU for most tasks to conserve battery life, and switches to dGPU when higher performance is required. In a hybrid configuration, some displays are driven by iGPU while others are driven by dGPU.

Multi Stream Transport (MST) Hub

MST hubs are devices that take one (1) DisplayPort™ or mini DisplayPort™ video connection, and go to many video connections, usually extra DisplayPort™, mini DisplayPort™, DVI or HDMI connections. This is accomplished through DisplayPort™ MST, or Multi-Stream Transport function.

Resolution Definitions

- FHD = 1920 x1200 or 1920 x 1080
- 2.5K = 2560 x 1600 or 2560 x 1440
- 3K = 3440x1440
- 4K UHD = 3840 x 2160
- 4K DCI = 4096 x 2160
- 5K = 5120 x 2880
- 6K = 6016x3384 (Apple XDR)
- 8K = 7680 x 4320

Thunderbolt™ 4

Thunderbolt™ 4 defines a superset of capabilities that runs on USB-C® connectors and cables. This enables docks and displays to connect to a Thunderbolt™ 3 port with a USB-C® connector.

Thunderbolt™ Cables

There are active, passive, and full-featured versions of Thunderbolt™ 4 cables on the market. A full-featured Thunderbolt™ 4 cable supports USB 3.1, DisplayPort™ 1.2, and Thunderbolt™. Use HP cables to avoid issues with improperly marked cables.

USB-C®

USB-C® is a specification for connectors and cables.

USB-C® High Resolution (a.k.a. Alt mode and USB-C® Video)

USB-C® High Resolutions requires the host PC to support the DisplayPort™ Alt mode protocol through its USB-C® port. Thunderbolt™-enabled notebooks will function at USB-C® speeds. Charging and port replication is supported on notebooks that have implemented USB-C® industry specifications. Alt mode includes support for DisplayPort™, Thunderbolt™ 4, and HDMI—all from the same USB-C® connector.
