

Keep document printing secure yet easily accessible

LRS MFPsecure works seamlessly with devices from a variety of vendors and interfaces with HP Access Control to enable a multivendor environment

What if you could...

- Streamline workflows for your users while improving document security?
- Institute a pull printing solution that supports multiple brands of printers?
- Reduce management time by centralising your printing infrastructure and tracking capabilities?
- Authenticate, print, and track on mixed printer fleets with HP Access Control?

With LRS MFPsecure—you can.

The challenge

Despite a predicted paperless workplace, document printing remains an important aspect of most organisations. Many businesses need to streamline workflows without sacrificing document security.

If sensitive documents are sent to a printer before they're needed, they may be left in an output tray, where anyone can pick them up.

Today's workers are increasingly working from multiple locations and need to print wherever they are. With multiple brands of printers in the workplace, keeping printing secure yet easily accessible can be complicated.

The solution

LRS MFPsecure provides for secure, flexible document queuing and release, and supports print devices from multiple vendors.¹

By holding print jobs until the user is at the MFP and requiring user authentication, pull printing helps ensure sensitive prints are collected by the verified user.

Users can send print jobs to their personal queue, then print whenever they're ready on any enabled device in the fleet by accessing their queue directly on the device's touchscreen.

LRS MFPsecure interfaces with HP Access Control, enabling seamless support for a multivendor environment.²

How LRS MFPsecure works

Real customers—real metrics

A major U.S.-based financial services provider with over \$5.5B in assets implemented MFPsecure to deliver secure pull printing to their nationwide mixed fleet. With more than 12,000 office workers in 700+ locations, the company needed a solution that was reliable, secure, and easy for their IT organisation to deploy and support.

Working together, LRS and HP staff helped the customer implement a pull print environment that reduced costs and helped them comply with privacy mandates.

The customer estimates they saved more than \$250,000 on consumables and \$350,000 on help desk and Level 2 support costs related to printing.

Access documents from any enabled MFP

Pull printing improves security and workflow efficiency by allowing users to place their print jobs in a personal queue, then manage and print those documents using the touchscreen interface of any enabled printer in the fleet.

Users can print individual documents or their entire queue with a single click at the printer's touchscreen. This secure document delivery solution helps protect the contents of sensitive documents.

As part of the VPSX Output Management solution suite, LRS MFPsecure can help improve compliance with security protocols with job tracking and pull printing reporting capabilities.

Range of vendors supported

LRS MFPsecure is an embedded pull printing solution for HP,² Canon, Konica Minolta, Kyocera, Lexmark, Ricoh, Samsung, and Xerox MFPs and printers. Whether your fleet contains devices from multiple vendors or one, pull printing is simple and more secure.

HP Access Control for multivendor fleets

LRS MFPsecure interfaces with HP Access Control, allowing you to use the capabilities of HP Access Control for nearly any fleet, whether your MFPs are all HP devices,² all from another vendor, or a mixed fleet. Both solutions work on the same platform/server environment for seamless integration.

With HP Access Control, you can provide the workflow features your teams need, whether they work onsite or remotely.

HP and LRS

The 22-year HP and LRS global alliance delivers effective software solutions in a single print-solution platform. This level of joint development provides strong relationships and communication at all levels, as well as a management commitment to continuing the strategic alliance.
