Make the most of existing PCs

HP ThinPro Converter

Easily extend the life of your aging devices¹ by converting them to Thin Clients with HP ThinPro PC Converter by mass deployment using HP Device Manager or boot-up from a USB.

Works with any x86 PC

Revitalize your legacy x86 desktops and laptops—regardless of OS or vendor—by converting them into efficient and secure thin clients.

Unified Communication

Ease of communication and collaboration with support for major unified communications platforms.

Secure, Remote access—anywhere

Secure, virus-resistant system

Protect data and important files with a Linux®-based OS that is inherently resistant to virus threats and malware.

Proactive protection controls

Prevent unauthorized updates with a read-only locked file system.

Customized data protection

Tailor security to your specific use case with features like single-sign-on local certificate management and a firewall.

Mixed-device management made simple

Maintain business continuity

Support and maintain devices with smaller and less frequent image updates and patches, helping ensure business continuity for your remote workforce.

Easy scalability for HP Thin Clients

Remotely deploy, update, manage, and monitor thousands of HP Thin Clients from anywhere through a single console with the included HP Device Manager³.

Mixed devices, consistent experience

Set the stage for future HP thin client deployments with Linux®-based computing that integrates neatly and is ready for the next evolution.
