

# 3 ways HP Flexworker supports your remote workforce

## HP Flexworker is available under your HP Managed Print Services contract

Supporting a hybrid workforce can be tricky without proper infrastructure in place. To that end, attempting to manage an enterprise fleet of printers for remote workers in home and satellite offices can cause a whole host of problems for IT teams.

But these aren't insurmountable obstacles. Here's how HP Flexworker can support IT to solve the 3 most common printing challenges caused by remote working.

### PROBLEM #1

## Inability to integrate print management across home and satellite offices

With HP Flexworker you can:

- Include printers across your home and satellite offices in your HP Managed Print Service (MPS) contract.
- Forget about managing multiple individual expense reports. The service allows you to centralize billing and consolidate reporting across your print fleet.
- Expect more printer uptime with next business day service. This means more business uptime and less hassle for IT teams.

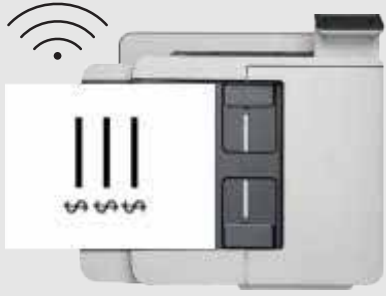

## Did you know?

82% of IT decision makers purchasing printers for a remote workforce agree printers help employees work more efficiently.<sup>1</sup>

### PROBLEM #2

## Supporting both remote working and the wider financial objectives of the business

HP Flexworker is great for finance because of:

- Flexible financing. Both leased and directly-purchased printers can be included in the monthly HP Managed Print Services invoice.
- A single, predictable rate for remote device management, support, and supplies provisioning.

## Did you know?

IT decision makers can support corporate financial objectives with Strategic Business Reviews (SBR), which provide:

A high-level strategic review of the organization's entire print fleet.

A contract to ensure that HP Managed Print Services is helping meet broader business goals.

### PROBLEM #3

## Aligning print objectives with the organization's security strategy

With HP Flexworker you can:

- Select from printers with HP Wolf Pro and Enterprise Security.
- Securely connect remote devices to the cloud for telemetry data and automatic supplies replenishment.
- Depend on remote worker security controls and recommendations that are formally integrated into the HP Print Security Advisory Service.

## Did you know?

HP's OfficeJet and LaserJet Pro devices, available within the HP Flexworker portfolio, are cloud-connected and security-hardened. This gives security-minded IT teams more convenience and peace of mind.
