

# HP Workpath

HP Enterprise LaserJet and PageWide MFP devices, using FutureSmart 4 release 4.9 or later, have the HP Workpath platform, which gives access to Workpath apps. This platform includes software development kits (SDKs) in industry-standard development technologies that can be used by HP and independent software vendors to develop apps that extend device capabilities.

While most A3 devices ship ready to support Workpath, A4 devices require additional memory, as detailed in the table below. For detailed instructions on enabling devices and installing apps, please reference the Deployment Guide.
